

## Get to Know Mohs

Mohs surgery is the most effective technique for removing basal and squamous cell carcinomas, resulting in the least amount of skin removed. Once the cancer is removed, the surgical defect is repaired in our office, resulting in a beautiful cosmetic outcome as well.

## Why Choose a Fellowship Trained Mohs Surgeon?

Mohs surgery is a delicate, intricate and highly effective treatment for skin cancer. It is performed strictly by dermatologists; however, not all dermatologists performing Mohs surgery are certified by the American College of Mohs Surgery (ACMS). Some physicians do not have formal fellowship training and oftentimes only complete a weekend instructional course for Mohs surgery. In order to become certified by the ACMS, a physician must complete a dermatology residency and an additional one to two years of specialty training in Mohs surgery and surgical reconstruction.

Dr. Andrew Nelson completed his dermatology residency at Harvard Medical School and then studied Mohs surgery and surgical reconstruction at UCLA. He is certified by the ACMS and has performed thousands of Mohs surgeries. Dr. Nelson also has extensive training in surgical reconstruction, resulting in beautiful cosmetic outcomes. By choosing Dr. Andrew Nelson as your patient's Mohs surgeon, your patients will receive the highest standard of quality and competency, as well as an ideal cosmetic result.

## RESULTS: Cure Rates of Mohs Surgery

### New Nonmelanoma Skin Cancers\*

**99%**  
Cure Rate

### Recurrent Nonmelanoma Skin Cancers\*

**95%**  
Cure Rate
